

- ✓ Protect access to endpoint devices including USB's, Bluetooth and iPods
- ✓ Create allowed list of company approved USB's and external hard drives
- ✓ Schedule access privileges at specific

With an increasing popularity of portable storage devices, theft of proprietary data is becoming a growing security challenge in today's computing environments. Portable devices also provide an easy entryway for infecting systems with viruses, spyware, Trojans and other damaging malware, thus compromising an organization's network.

AccessPatrol, provides a proactive solution for securing company endpoints (USBs, CD/DVDs, Bluetooth, WiFi, FireWire, iPods, MP3s) to prevent illicit transfer of data to unauthorized devices.

✓ **Manage data leakage and system infection**

AccessPatrol manages endpoint device access both on and off the network. Unauthorized access or transfer of data through USB flash drives, CDs, iPods, MP3s, FireWire, WiFi, Bluetooth on all company systems, can be managed centrally through AccessPatrol's web console.

✓ **Security Levels**

Security levels to devices include full access, read only or no access. With a few simple clicks, endpoint security can be readily implemented through the centralized console. The web based console, provides the additional benefit of being able to access the console from any location.

✓ **Offsite Device Management**

When a laptop or computer is offsite, AccessPatrol can still manage the security of endpoint devices. If access to blocked devices is legitimately required, then AccessPatrol can be easily configured to grant permissions.

✓ **Allowed List**

While AccessPatrol can restrict access to all endpoint devices, the Allowed List feature restricts access to only company authorized devices of USBs, FireWire and External Hard Drives.

This minimizes leakage of sensitive data or infection of systems through unapproved or personal employee devices.

Supported Operating Systems

AccessPatrol Server/Console:
Windows 2008, XP, Vista, Win 7, 8

AccessPatrol Client:
Windows 2008, XP, Vista, Win 7,8

Rules can be defined to grant permission to certain devices.

"It works a treat! Simple solution, I managed to install and use within 15 minutes. We needed a simple solution to lock/unlock USB on user PCs but it also has some other features we will use too."
